SKYHEDGE

Weather protection you buy from your phone

Parametric rainfall coverage on Solana Mobile — quote, approve in Phantom, settle from NOAA.

PROBLEM

Weather risk is everywhere. Cover is not.

- Operators lose days to rain – flights, lifts, haul roads, events, harvests.
- Traditional weather cover is slow, paperwork-heavy, and sized for big buyers.
- Disputes and adjusters add delay after the storm already hit.

SOLUTION

Parametric protection on Solana

- Fixed payout when public weather data crosses a published trigger.
- Instant quote from NOAA history + forecast; fractional coverage amounts.
- Fully collateralized per-city vaults in an Anchor program — no claims desk.

DEMO

Markets → Protect → Phantom → Wallet

1–2 · Markets & Protect

Pick Des Moines rainfall, see NOAA chart, choose coverage, read the option ticket.

3–4 · Approve & Wallet

Review in Phantom via Mobile Wallet Adapter. Position + Explorer link on Wallet.

Native React Native Android app for Solana Seeker · SKYT Devnet test token

SETTLEMENT

How settlement works

- Observation window closes → settlement authority posts hashed NOAA package.
- Program compares cumulative rain to the immutable trigger.
- Triggered → buyer claims fixed payout from the vault. Not triggered → premiums stay for LPs.
- 1% protocol fee accrues in the premium; waived on data-unavailable refunds.

ORACLE FAILURES

Fail closed. Refund when data never arrives.

- Incomplete or flagged NOAA days are rejected — never invented.
- After data deadline with no observation: permissionless `mark_data_unavailable` → premium refund.
- Once an observation exists: permissionless `settle_market` so settlement cannot stall.

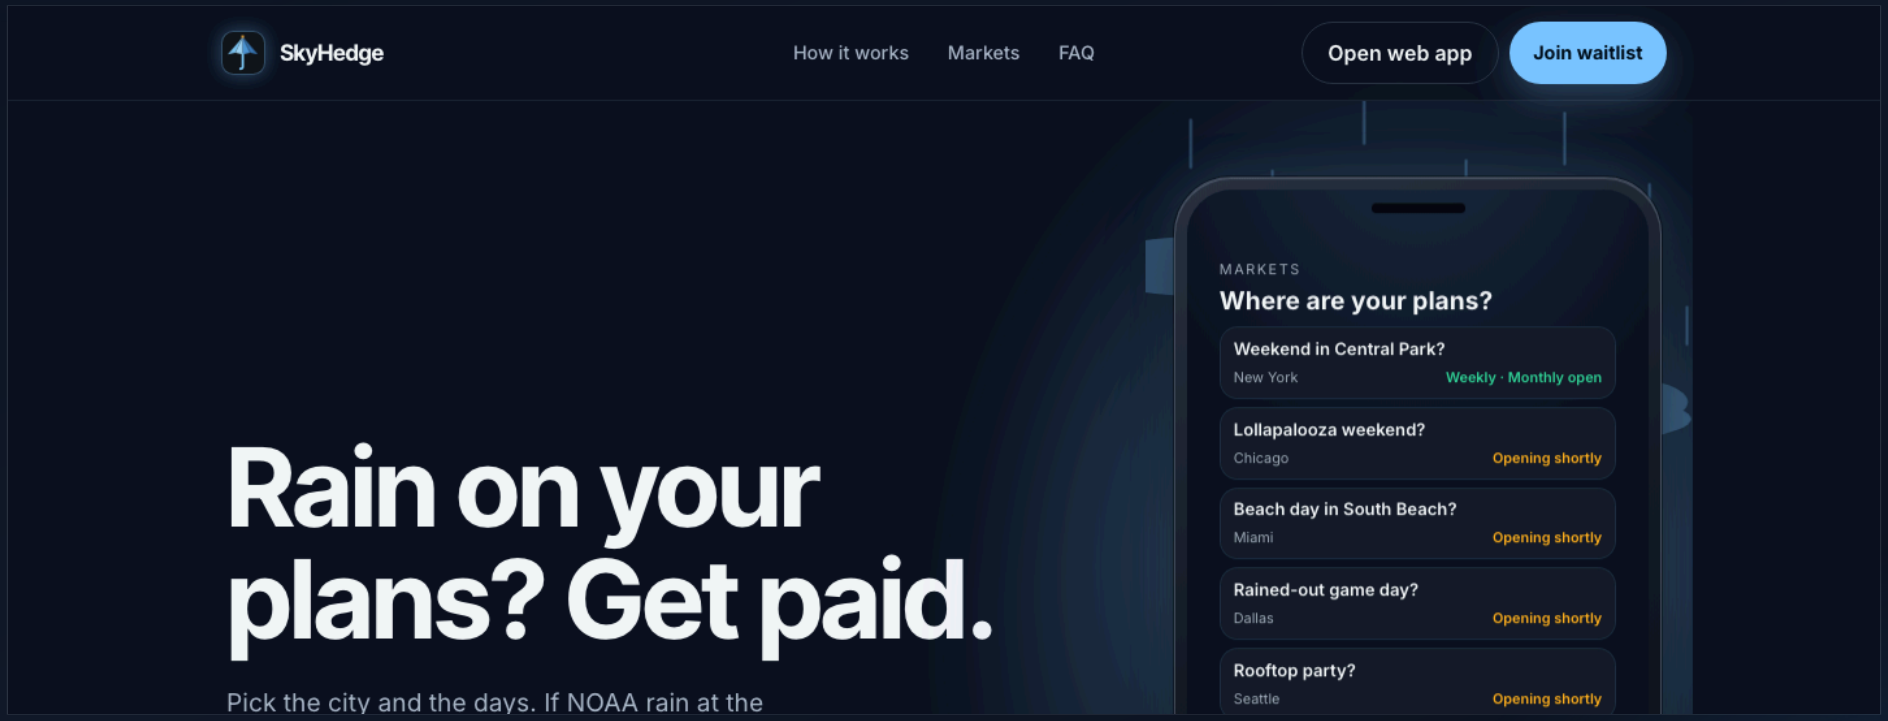

TRACTION

Pre-launch · honest status

- Live waitlist at **skyhedge.app** (Neon-backed; no public count).
- Devnet OpenPosition purchase proven via Seeker → Phantom (see README Explorer link).
- No fabricated user or volume metrics.

PRODUCT

Rain on your plans? Get paid.

ROADMAP

What comes after this Devnet demo

- More cities, plus heat markets, on the same window ladder.
- Toronto when Environment Canada rainfall is wired in. No price until that data is in.
- Card payments for people without a wallet: Visa and Mastercard through an onramp such as MoonPay or Stripe, plus Phantom social login. After legal review.
- A separate on-chain keeper role, so window rolling is not the admin key.
